

Why we're members of App Advisory Plus

Technology that was previously only available to larger businesses is now available to smaller businesses and this is providing big opportunities for them to improve their processes and profits using apps.

Small businesses that implement apps well will be better placed to serve their customers than those that don't.

Increasingly businesses are turning to us for technology advice and we want to deliver these high value services. That's why we became founder members of App Advisory Plus.

App Advisory Plus is an independent platform that provides an information directory of quality-assessed apps that integrate with cloud accounting platforms. This sits alongside a user-community forum, knowledge base, and helpdesk support system.

Our membership of App Advisory Plus provides us with expert resources and support to deliver app advisory services including:

- Assessments of current technology and processes
- Scoping technology and process change projects
- Defining functional requirements
- Evaluation of available technology
- Digital transformation and technology implementation projects
- Technology training
- Technology support

If you would like more information about our app advisory services get in touch.
